MODU-DECK

MODULAR ELECTRONIC CONCRETE DECK SCALES

WEIGH BRIDGE

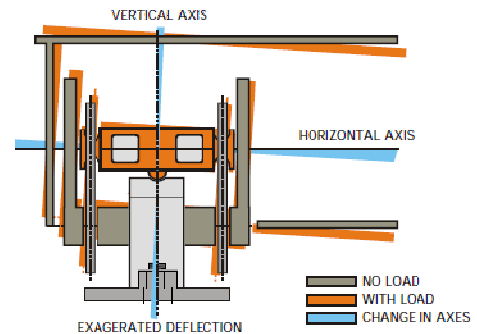

The Modu-Deck CMD series concrete deck model truck scale has a composite design weighbridge which mechanically connects the steel structure with the poured in place concrete resulting in extremely low deflection ratios, less fatigue and unusual long life. The CMD is available for pitless or pit installation.

LOAD CELLS

All Modu-Deck 5 Series truck scales are provided with NTEP approved, double link, centre fulcrum, shear beam, hermetically sealed load cells with IP67, IP68, and IP69 ratings. Cables have an external armoured braiding to prevent damage from abrasion and chewing rodents.

LOAD CELL ASSEMBLY

The Modu-Deck 5 Series utilizes the time proven parallel link suspension system allowing compensation for thermal expansion and contraction of the weighbridge. With 360° rotation, the system eliminates all negative aspects of uni-directional systems. The load cell fulcrum rests in a machined radius with no bolt down hardware, making replacement a simple task taking a matter of minutes reducing down time and service costs.

OPTIONS

- TIRE GUIDERAILS
- MSHA COMPLIANT GUIDE RAILS
- HANGING WALKWAYS
- 11 AND 12' WIDTHS
- SURGE PROTECTION
- EXTENDED WARRANTIES

Customized heights, widths, lengths available to suit existing foundations are our specialty
