

TOP 10 REASONS TO BUY A CARDINAL TRUCK SCALE

1

Reduce Risk With Single Source Manufacturing:

When you purchase a truck scale it is important to consider availability and warranty concerning ALL the product's components. Cardinal Scale produces and warrants every component in the scale including the load cells, electronic junction boxes and the weight instrument. All of this gives you, the buyer, the minimum risk in a long term investment.

2

Stainless Steel Load Cells:

The most significant component of a truck scale is the load cell. Cardinal Scale boasts the most advanced load cell production facility in the United States. Our load cells are individually tested to meet and exceed design parameters and are 100% stainless steel and environmentally-sealed to insure that your scale performs well even in the harshest environment.

3

Superior Bridge Design:

Cardinal Scale utilizes a robot welding system to insure continuity of all welding and fabrication. With over 58 years of high capacity scale experience, Cardinal truck scales are well known for having many years of reliable operation.

4

Exterior Scale Protection:

All of the steel utilized in our scales is shot blasted and then painted with a baked-on epoxyde cross-linked polyester anticorrosion paint. This is unmatched for total environmental protection.

5

Weight Indicators:

Cardinal Scale produces a complete range of weight indicators designed to meet any operational sequence you require for your business. Many of these instruments are designed with NEMA 4X enclosures for added protection in the harsh environments truck scales operate in. Cardinal's wireless truck scales can even eliminate costly construction work on your site, eliminating the need to run cumbersome lines and dig trenches across the facility.

6

Stainless Steel Electronics Boxes:

Cardinal Scale adds value where you least expect it. Our electronic junction boxes feature stainless steel NEMA 4X protection to prevent weather from affecting the way your scale performs.

7

Automated Systems Design:

Whether you require unattended operation, special materials tracking, multiple scales for in and out weighing, or bar code scanners, Cardinal Scale can customize our products to work exactly like you need them. We won't change the way you do things, we will make what you do more efficient to save you money in the long run.

8

Premium Security Of Operation:

The Cardinal iCan fiber optic load cell system can provide you with added service support when you need it most and further protect you from unnecessary down time. The iCan system is designed to alert you of errors in the weighing components. The fiber optic cabling provides further protection against voltage surges and lightning strikes. Additionally, Cardinal offers iSite remote diagnostic software for monitoring your scale from anywhere in the world via an internet connection. Reduce your risk with Cardinal's iCan.

9

5 Year Bridge-And-Below Warranty:

To give you peace of mind and ensure that you make the best buying decision by using Cardinal products, we proudly boast a 5-year warranty covering manufacturer defects in the weighbridge and electronic components under the scale.

10

Made In The USA:

You have the chance to purchase from a U.S. manufacturer with over 58 years of truck scale manufacturing experience. Your risk is eliminated when you own a Cardinal truck scale. You have only one source and one call to make for new products and service support. Cardinal is an ISO 9001:2000 registered company. Design, manufacture, and service are all part of our quality oriented philosophy.
